

Acknowledgements

First, I would like to thank Prof. Dr. W. Kleemann for the integration in his group, his extensive supervision, steady preparedness to thorough discussions and active support to solve all problems.

I am grateful to Dipl. Ing. Manfred Aderholz for his help during assembling of the UHV Kerr-apparatus and his steady helpfulness with all technical problems and, in addition, for his friendly and unselfish support in whatever situation.

I warmly thank all co-workers of research group Kleemann, Dr. Christian Binek, Helmut Junge, Dr. Theo Kleinefeld, Peer Lehnen, Oleg Petravic, Peter Schnieder, Ph.D. Yu-Guo Wang and Mrs. Irene Zeitz as well as Dr. Ulrich Bianchi, Martin Kaselow, Dr. Jörg Kushauer, Josè-Carlos Oliveira de Jesus and Martin Schilberg, for the pleasant working climate and distinct helpfulness.

I would like to thank Prof. Dr. W. Keune for his deep interest, his steady willingness to discussions and the successful co-operation. I also thank Priv.-Doz. Ph.D. R.A. Brand for useful discussions as well as Dipl. Ing. Ulich von Hörsten for his support with many technical problems mostly in the field of UHV technology. In particular, I thank all co-worker of research group Keune, Dr. Stefan Kruijer, Oliver Marks, Stefan Neumann, Dr. Fabienne Richome, Tobias Ruckert and Dr. Bernd-Manfred Scholz, for helpfulness and kind friendship.

I am indebted to Prof. Dr. W. Andrä for his intensive supervision, engagement at the carrying out torque measurements and his personal care during my stay at the Institut für Physikalische Hochtechnologie at Jena.

I thank the crew of the mechanical workshop for their helpfulness and support during the assembling of the UHV Kerr-apparatus.

I am indebted to my family and friends. They have supported me with wide tolerance and kind patience.

Finally, this thesis was performed within the framework of the project G6 of Sonderforschungsbereich 166 of the Deutsche Forschungsgemeinschaft. I am grateful for the financial support.
